

Housing quality: Breakdown by income

Downloaded from <https://www.canterburywellbeing.org.nz/our-wellbeing/housing/housing-quality/#ink-breakdown-by-income> on 25/10/2020 7:51 AM

The figure shows an overall pattern of increased satisfaction with the quality of the home with increasing household income. The proportion of respondents in the less than \$30,000 income bracket satisfied or very satisfied with housing quality was statistically significantly lower than that for respondents from all the other income groups in 2019. In contrast, those in the \$100,000+ household income group were statistically significantly more likely to indicate being satisfied or very satisfied than respondents from all other income groups, at all time-points.

Data Sources for Housing quality

Source: Canterbury District Health Board.

Survey/data set: Canterbury Wellbeing Survey to 2019. Access publicly available data from the Community and Public Health (Canterbury DHB) website www.cph.co.nz/your-health/wellbeing-survey/

Source data frequency: Annually.

Metadata for the Housing quality indicator is available at <https://www.canterburywellbeing.org.nz/index-data>
