

Quality of life: Breakdown by disability

Downloaded from <https://www.canterburywellbeing.org.nz/our-wellbeing/subjective-wellbeing/quality-of-life/#link-breakdown-by-disability> on 19/06/2021 9:18 AM

The figure shows lower levels of overall quality of life (proportion of those rating their quality of life as good or extremely good) for respondents with a long-term health condition or disability, compared with those without, from 2012 to 2019. The substantial difference between the groups has been persistent and statistically significant for all time-points in the series (for 2019, the proportion of respondents rating their quality of life as good or extremely good was 69.1% for those with a long-term health condition or disability and 91.0% for those without). There appears to be an overall upward trend for both groups, although trend analysis is not available for these data.

Data Sources for Quality of life

Source: Canterbury District Health Board.

Survey/data set: Canterbury Wellbeing Survey to 2019. Access publicly available data from the Community and Public Health (Canterbury DHB) website www.cph.co.nz/your-health/wellbeing-survey/

Source data frequency: Annually.

Metadata for the Quality of life indicator is available at <https://www.canterburywellbeing.org.nz/index-data>
